

## Machine Learning Assignment-3

Q1 d

Q2 d

Q3 c

Q4 b

Q5 d

Q6 c

Q7 d

Q8 a

Q9 a

Q10 a

Q11 a

Q12 b

Q13. Clustering is process of making groups from given data set(UNLABELED DATA SET) based on the similar identities

So it simplify the process of large dataset.

So it has big impact on sales and customer satisfaction by increasing revenue or cut costs.

Q14 We can improve my clustering process:

1. creating input features for cluster size as integer (default )as well as continuous/float
2. creating different label/model for different groups/cluster group.
